

Enerit Systematic Energy Manager

The ISO 50001 way of working focused on Energy Savings

Overview

Enerit Systematic Energy Manager:

- Is based on the ISO 50001 “way of working” which is proven to deliver optimal energy saving results within one or multiple sites.
- Enables you to implement best energy management practices whether or not your organization is seeking certification.
- Focuses on the energy saving aspects of ISO 50001 - energy review, energy uses (SEUs), objectives and targets, improvement opportunities, energy plans and action management
- Can be added to your existing environmental (or EHS) management system to become the specialist energy part of your integrated management system
- Integrates with your existing monitoring and targeting software

Benefits for Energy Managers

- One “go-to” location for all information related to your organization’s energy management - accessible anytime on any PC, laptop or tablet
- Instantly visualize organization wide energy performance on Enerit’s intuitive dashboard for one or multiple sites
- Have a top-down view using powerful interactive graphics to show energy flow from energy sources to significant energy uses (SEU’s) within a plant or building via a Sankey interface.
- Add improvement opportunities and visually see the energy and cost saving impact on the organization
- Create a dynamic and shareable action plan complete with energy objectives and targets
- Assign and track actions and target dates to energy team members ensuring no action points are lost
- Capture inputs and outputs of energy team and management review meetings ensuring each action is assigned an owner
- Record performance indicator data and present engaging EnPI report charts
- Includes all the benefits and functions of Enerit Energy Flow Assessor
- Integrates with existing internal management system (e.g. ISO 14001 or ISO 9001) facilitating the addition of ISO 50001 in one integrated system
- If an internal management system is not in place, simply upgrade to Enerit ISO 50001 Manager Pro which comes with a complete built-in management system

Benefits for Energy Consultants

Energy Consultants can utilize Enerit Systematic Energy Manager in a variety of ways

- **Provide a 3rd Party Energy Management Service**
Act as a 3rd party Energy Manager for one or multiple clients managing individual sites remotely using Enerit Systematic Energy Manager.
- **Set Up a New Energy Management System for your Clients**
Create a new energy management system within a single or multi-site organization with Enerit Systematic Energy Manager. Once the system is in place, hand over system management to the in-house energy team.
- **Assist Clients Seeking ISO 50001 or SEP Certification**
Work with clients as they implement ISO 50001 or SEP certification for one or multiple locations by inputting data into Enerit Systematic Energy Manager and ensuring all necessary actions are taken.
- **Maintain Long-term Customer Relations**
For Facility Management and Energy Service companies, maintain long-term customer relations by using Enerit Systematic Energy Manager's cloud based system to efficiently manage with less on-site meetings, phone calls and travel.
