

Enerit ISO 50001 Software

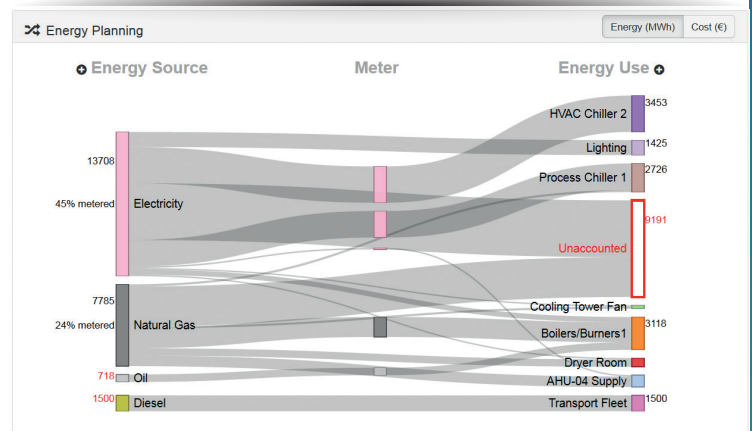

info@enerit.com • www.enerit.com

What is different about Enerit software?

Unlike energy monitoring and energy data reporting systems, Enerit software deals with all the opportunities, plans, actions, communication and documents needed for ISO 50001 in a workflow-based solution.

Who is Enerit software for?

- ✔ Large energy using organizations who adopt the ISO 50001 or SEP "way of working"
- ✔ Users in industry (e.g. automotive, paper, healthcare, plastics, food & drink)
- ✔ Public/private sector buildings (such as airports, universities, hospitals & banks)
- ✔ World-wide customers: North America; Europe; Asia; Middle-East and Africa
- ✔ Energy Managers and Facility Managers
- ✔ Environmental, Health, Safety & Quality Managers
- ✔ Organizations who want to certify to ISO 50001 & SEP
- ✔ Organizations who don't need certification but want to follow best practices
- ✔ Organizations who want to go beyond energy monitoring
- ✔ Organizations who want to upgrade from home-built ISO systems

"The software leads to the automation and implementation of the ISO 50001 standard, and goes beyond completing the standard to allow users to save energy on an on-going basis."

Maurice Ahern, Energy Manager,
UCC, World's 1st ISO 50001 University

Enerit ISO 50001 Software helps you:

- ✔ Add ISO 50001 to your existing ISO 9001/14001 systems, minimizing administration
- ✔ Save staff time during the certification process & maintaining it in the long-term
- ✔ Increase energy savings through excellent organization and teamwork
- ✔ Take the risk out of the ISO 50001 certification process
- ✔ Upgrade from spreadsheets to real workflow, maximizing time and energy efficiency
- ✔ Integrate energy monitoring systems to generate meaningful management reports

What does Enerit software do?

Enerit software has capability of supporting you on all aspects of ISO 50001. As well as all the management system capability that you would expect (Document Management, Audit & Non-Conformance Management, Meetings & Management Review), our unique energy management functionality supports:

- Energy review process visualized through integrated Sankey energy flow diagrams
- Identifying baselines and EnPIs
- Capturing & prioritizing improvement opportunities for easy decision-making
- Automated assignment of actions with target dates & reminders to energy team members
- Management reports including energy and action status dashboard

You have 2 options in Enerit software:

1. Use Enerit **Systematic Energy Manager** together with your existing management systems for ISO 9001 & 14001. You continue to maximize the usage of your current ISO systems and simply “bolt on” the extra Enerit functionality
2. Use Enerit **ISO 50001 Manager Pro** to have a complete stand-alone ISO 50001 system, including all the document management, audit management and corrective action functionality that you need. You can also use this Enerit software version to manage your ISO 9001, ISO 14001 and OHSAS 18001 systems in one single application.

About Enerit

Founded in 2004, Enerit is the world’s first company to develop software which provides complete coverage of all ISO 50001 processes. Enerit achievements include:

- ✔ world’s first ISO 50001 software
- ✔ world’s first Pfizer plant certified to ISO 50001
- ✔ world’s first university with ISO 50001 (University College Cork)
- ✔ Harbec USA gains SEP Platinum and is No. 3 in SEP rankings with 16.5% cost savings using Enerit software
- ✔ Launch of Enerit multi-standard software for ISO 9001/14001, OHSAS 18001 & ISO 50001.

Maximize the Value of your Enerit Investment

- ✔ Software Deployment Services are delivered by Enerit and its global partnership network.
- ✔ Together with partners, we offer: project management; implementation; customization; training; integration; your choice of SaaS or On-premises hosting.

Reduce Implementation Costs • Cut Energy Costs • Expedite Certification

“SAVED 50% OF THE TIME NEEDED TO LOOK AFTER ISO 50001”

ENERGY TEAM LEAD, PFIZER
